(local govt. or agency)

JOINT AQUATIC RESOURCES PERMIT APPLICATION FORM (JARPA)

(for use in Washington State)

PLEASE TYPE OR PRINT IN BLACK INK.

- ☒ Application for a Fish Habitat Enhancement Project per requirements of RCW 77.55.290. You must submit a copy of this completed JARPA application form and the (Fish Habitat Enhancement JARPA Addition) to your local Government Planning Department and Washington Department of Fish & Wildlife Area Habitat Biologist on the same day.

NOTE: LOCAL GOVERNMENTS – You must submit any comments on these projects to WDFW within 15 working days.

Based on the instructions provided, I am sending copies of this application to the following: *(check all that apply)*

- ☒ Local Government for shoreline: ☒ Substantial Development ☒ Conditional Use ☒ Variance ☒ Exemption ☐ Revision
☒ Floodplain Management ☒ Critical Areas Ordinance
- ☒ Washington Department of Fish and Wildlife for HPA (Submit 3 copies to WDFW Region)
☒ Washington Department of Ecology for 401 Water Quality Certification (to Regional Office-Federal Permit Unit)
☒ Washington Department of Natural Resources for Aquatic Resources Use Authorization Notification
☒ Corps of Engineers for: ☒ Section 404 ☐ Section 10 permit
☐ Coast Guard for: ☐ General Bridge Act Permit ☐ Private Aids to Navigation (for non-bridge projects)
☐ For Department of Transportation projects only: This project will be designed to meet conditions of the most current Ecology/Department of Transportation Water Quality Implementing Agreement

SECTION A - Use for all permits covered by this application. Be sure to ALSO complete Section C (Signature Block) for all permit applications.

1. APPLICANT

National Park Service – Olympic National Park

826 E. Front St., Suite A, Port Angeles, WA 98362

Range

Government Lot

DNR stream type if known

F

Latitude and Longitude: See Individual Project Data

Tax Parcel Number

See Ownership List

6. Describe the current use of the property, and structures existing on the property. Have you completed any portion of the proposed activity on this property? ☐ YES ☒ NO
For any portion of the proposed activity already completed on this property, indicate month and year of completion.
Current use of the properties include two dams producing hydropower, several private residences, Lower Elwha Klallam Tribe Reservation, flood control levees, Washing State salmon rearing facilities, and an existing M&I diversion and Ranney collector. See Individual Project Data for site specific project descriptions and additional information.

Is the property agricultural land? ☐ YES ☒ NO Are you a USDA program participant? ☐ YES ☒ NO

7a. Describe the proposed work that needs aquatic permits: Complete plans and specifications should be provided for all work waterward of the ordinary high water mark or line, including types of equipment to be used. If applying for a shoreline permit, describe all work within and beyond 200 feet of the ordinary high water mark. If you have provided attached materials to describe your project, you still must summarize the proposed work here. Attach a separate sheet if additional space is needed.
Aquatic permits are needed for the removal of Elwha and Glines Canyon Dams and the resultant release of approximately 8.5 million cubic yards of accumulated river sediments; removal of an existing rock diversion dam; construction of a new fish friendly diversion and temporary diversion channel; flood protection for public and private facilities due to anticipated increase in water surface elevations; and temporary intake pumps and permanent outfalls for a new water treatment plant. See Individual Projects Data.
PREPARATION OF DRAWINGS: See sample drawings and guidance for completing the drawings. **ONE SET OF ORIGINAL OR GOOD QUALITY REPRODUCIBLE DRAWINGS MUST BE ATTACHED.** NOTE: Applicants are encouraged to submit photographs of the project site, but these DO NOT substitute for drawings. **THE CORPS OF ENGINEERS AND COAST GUARD REQUIRE DRAWINGS ON 8-1/2 X 11 INCH SHEETS. LARGER DRAWINGS MAY BE REQUIRED BY OTHER AGENCIES.**

7b. Describe the purpose of the proposed work and why you want or need to perform it at the site. Please explain any specific needs that have influenced the design.
The Elwha River ecosystem and native anadromous fisheries are severely degraded as a result of two hydroelectric dams and their reservoirs built in the early 1900's. Congress has mandated the full restoration of this ecosystem and its native anadromous fisheries through the Elwha River Ecosystem and Fisheries Restoration Act (P.L. 102-495). The Department of Interior proposes to accomplish this purpose and to fulfill the congressional mandate of returning the Elwha River and ecosystem to its natural, self regulating state by removing Elwha and Glines Canyon Dams. See "Purpose and Need" attachment for additional information.

7c. Describe the potential impacts to characteristic uses of the water body. These uses may include fish and aquatic life, water quality, water supply, recreation and aesthetics. Identify proposed actions to avoid, minimize, and mitigate detrimental impacts and provide proper protection of fish and aquatic life. Identify which guidance documents you have used. Attach a separate sheet if additional space is needed.
The Department of Interior has recognized that several beneficial and adverse impacts will occur during and after dam removal. Most of the impacts will be beneficial and fully support the purpose of this restoration project. Adverse impacts to water quality and quantity; flooding; groundwater levels; and short term impacts to fisheries will be mitigated as described in the attached project specific documentation.

7d. For in water construction work, will your project be in compliance with the State of Washington water quality standards for turbidity WAC 173.201A-110? ☒ YES ☐ NO (See USEFUL DEFINITIONS AND INSTRUCTIONS)

8. Will the project be constructed in stages? YES ☒ NO ☐
Proposed starting date: 8/2006
Estimated duration of activity: 7 years

9. Check if any temporary or permanent structures will be placed:
☒ Waterward of the ordinary high water mark or line for fresh or tidal waters AND/OR
☒ Waterward of the mean higher high water for tidal waters?

10. Will fill material (rock, fill, bulkhead, or other material) be placed:
☒ Waterward of the ordinary high water mark or line for fresh waters?
If YES, VOLUME (cubic yards) Approx. 8 Million / AREA Approx. 13 (acres) plus 16 miles of river.
☐ Waterward of the mean higher high water for tidal waters?
If YES, VOLUME (cubic yards) / AREA (acres)

11. Will material be placed in wetlands? ☒ YES ☐ NO
If YES:
A. Impacted area in acres: Approx. 2 acres from construction and potential to cause filling on 223 acres from sediment erosion
B. Has a delineation been completed? If YES, please submit with application. ☒ YES ☐ NO
C. Has a wetland report been prepared? If YES, please submit with application ☒ YES ☐ NO
D. Type and composition of fill material (e.g., sand, etc.) Grade materials and Riprap
E. Material source: commercial source
F. List all soil series (type of soil) located at the project site, and indicate if they are on the county's list of hydric soils. Soils information can be obtained from the natural Resources Conservation Service (NRCS). Carlsborg/Puget/Dungeness Series
G. WILL PROPOSED ACTIVITY CAUSE FLOODING OR DRAINING OF WETLANDS? ☒ YES ☐ NO
If YES, IMPACTED AREA IS 230 ACRES OF DRAINED Lake fringe WETLANDS
NOTE: If your project will impact greater than ½ of an acre of wetland, submit a mitigation plan to the Corps and Ecology for approval along with the JARPA form.
NOTE: A 401 water quality certification will be required from Ecology in addition to an approved mitigation plan if your project impacts wetlands that are: a) greater than ½ acre in size, or b) tidal wetlands or wetlands adjacent to tidal water. Please submit the JARPA form and mitigation plan to Ecology for an individual 401 certification if a) or b) applies.

12. Stormwater Compliance for Nationwide Permits Only: This project is (or will be) designed to meet ecology's most current stormwater manual, or an Ecology approved local stormwater manual. ☐ YES ☐ NO
If YES – Which manual will your project be designed to meet?
If NO – For clean water act Section 401 and 404 permits only – Please submit to Ecology for approval, along with this JARPA application, documentation that demonstrates the stormwater runoff from your project or activity will comply with the water quality standards, WAC 173.201(A)

13. Will excavation or dredging be required in water or wetlands? ☒ YES ☐ NO
If YES:
A. Volume: 9100 (cubic yards) /area 2.5 (acre)
B. Composition of material to be removed: River alluvium
C. Disposal site for excavated material: Either reused or disposed of at an approved upland site
D. Method of dredging: Standard hydraulic equipment

14. Has the State Environmental Policy Act (SEPA) been completed ☒ YES ☐ NO
SEPA Lead Agency: Clallam Co., WA is/has preparing documentation adopting existing NEPA compliance.
SEPA Decision: DNS, MDNS, EIS, Adoption, Exemption Adoption Decision Date (end of comment period) 4/15/06
SUBMIT A COPY OF YOUR SEPA DECISION LETTER TO WDFW AS REQUIRED FOR A COMPLETE APPLICATION

15. List other Applications, approvals or certifications from other federal, state or local agencies for any structures, construction discharges or other activities described in the application (i.e. preliminary plat approval, health district approval, building permit, SEPA review, federal energy regulatory commission license (FERC), Forest practices application, etc.). Also, indicate whether work has been completed and indicate all existing work on drawings. NOTE: For use with Corps Nationwide Permits, identify whether your project has or will need an NPDES permit for discharging wastewater and/or stormwater.

TYPE OF APPROVAL	ISSUING AGENCY	IDENTIFICATION NO.	DATE OF APPLICATION	DATE APPROVED	COMPLETED?
FEIS/ROD Elwha River Program.	NPS			2/26/1996	Yes
FEIS/ROD Elwha River Restor.	NPS			12/23/1996	Yes
SEIS/ROD Elwha River Imp.	NPS			10/21/2005	YES
NHPA Sec. 106	ACHP			6/08/1995	Yes

16. Has any agency denied approval for the activity you're applying for or for any activity directly related to the activity described herein?
☐ YES ☒ NO
If YES, explain:

17a. Total cost of project. This means the fair market value of the project, including materials, labor, machine rentals, etc.

\$184,600,000.00

17b. If a project or any portion of a project receives funding from a federal agency, that agency is responsible for ESA consultation. Please indicate if you will receive federal funds and what federal agency is providing those funds. See instructions for information on ESA.*

FEDERAL FUNDING ☒ YES ☐ NO If YES, please list the federal agency. NPS

18. Local government with jurisdiction: Clallam Co., WA

19. For Corps, Coast Guard and DNR permits, provide names, addresses and telephone numbers of adjoining property owners, lessees, etc. **Please note:** Shoreline Management Compliance may require additional notice – consult your local government.

NAME	ADDRESS	PHONE NUMBER
See Ownership List		

SECTION C - This section MUST be completed for any permit covered by this application

20. Application is hereby made for a permit or permits to authorize the activities described herein. I certify that I am familiar with the information contained in this application, and that to the best of my knowledge and belief, such information is true, complete, and accurate. I further certify that I possess the authority to undertake the proposed activities. I hereby grant to the agencies to which this application is made, the right to enter the above-described location to inspect the proposed, in-progress or completed work. I agree to start work **ONLY** after all necessary permits have been received.

THIS APPLICATION <u>MUST</u> BE SIGNED BY THE APPLICANT AND THE AGENT, IF AN AUTHORIZED AGENT IS DESIGNATED.	

18 U.S.C §1001 provides that: Whoever, in any manner within the jurisdiction of any department or agency of the United States knowingly falsifies, conceals, or covers up by any trick, scheme, or device a material fact or makes any false, fictitious, or fraudulent statements or representations or makes or uses any false writing or document knowing same to contain any false, fictitious, or fraudulent statement or entry, shall be fined not more than \$10,000 or imprisoned not more than 5 years or both.

COMPLETED BY LOCAL OFFICIAL

- A. Nature of the existing shoreline. (Describe type of shoreline, such as marine, stream, lake, lagoon, marsh, bog, swamp, flood plain, floodway, delta; type of beach, such as accretion, erosion, high bank, low bank, or dike; material such as sand, gravel, mud, clay, rock, riprap; and extent and type of bulkheading, if any)
- B. In the event that any of the proposed buildings or structures will exceed a height of thirty-five feet above the average grade level, indicate the approximate location of and number of residential units, existing and potential, that will have an obstructed view:
- C. If the application involves a conditional use or variance, set forth in full that portion of the master program which provides that the proposed use may be a conditional use, or, in the case of a variance, from which the variance is being sought:

Purpose and Need

The Elwha and Glines Canyon Dams:

- block native anadromous fish passage to the majority of the Elwha River and tributaries;
- trap sediments and woody debris which are critical components of anadromous fish habitat and which maintain the Elwha River estuary;
- limit nutrients important to the aquatic and terrestrial food chain of the Elwha River valley;
- raise water temperatures, resulting in higher incidence of diseased or physiologically stressed fish;
- inundate important riverine and terrestrial habitat;
- inundate lands and sites of cultural and religious significance to the Lower Elwha S'Klallam Tribe;
- Glines Canyon Dam is within the boundary of Olympic National Park, but in conflict with park policy to restore fisheries and aquatic habitats to their natural states;
- result in beach erosion on the Elwha Reservation and east to Ediz Hook;
- are inconsistent with the federal trust responsibility to four affected Indian tribes.

These are the specific problems Interior intends to resolve in following congressional mandate to "...fully restore the Elwha River ecosystem and native anadromous fisheries..." consistent with the rights of Indian tribes secured by treaty or other federal law as stated in the Elwha Restoration Act (PL 102-495). Removing both dams will alleviate each of the above conditions, either completely or to a very large degree. Therefore, Interior finds there is a need to accomplish the congressional and agency purpose of full restoration of the Elwha River ecosystem and native anadromous fisheries through its proposed action of removing both the Elwha and Glines Canyon Dams. The specific Department of Interior objectives are:

1. Fully restore all runs of Elwha River native anadromous fish
2. Restore the Elwha River ecosystem

Congress directed Interior to determine the feasibility of dam removal scenarios, protect downstream water quality for municipal and industrial users, and evaluate options for the disposition of acquired lands outside park boundaries. Specific alternatives for dam removal, protecting water quality for municipal and industrial users, and disposition of lands can be found in the *Elwha Report* (NPS 1994). All were considered technically feasible by Interior. The *Elwha River Ecosystem Restoration* FEIS and ROD (1996) evaluated options for restoring the Elwha River ecosystem and native anadromous fisheries and is referred to as the Programmatic FEIS. The subsequent "Record of Decision" selected the removal of both dams as the only option that would accomplish full ecosystem restoration.

The *Elwha River Ecosystem Restoration Implementation* FEIS and ROD (1996) examined two ways of removing the dams, as well as the sediment stored behind them. The Record of Decision selected "river erosion" as the preferred alternative for removing sediment. (The Implementation FEIS included only specific changes to the DEIS, not the entire text of the draft

document. Subsequently, a compilation of the DEIS and FEIS was prepared that includes all the text of the draft, along with changes presented in the FEIS, plus responses to comments and the U.S. Fish and Wildlife Service's "Biological Opinion.")

The impacts of the dams to the entire Elwha River ecosystem are analyzed and documented in both EISs and extensive public involvement accompanied them. Both the Programmatic FEIS and the Implementation FEIS can be found on the Internet at <http://www.nps.gov/olym/elwha/home.htm>.

Work has not yet begun to remove the dams, and in the intervening years the U.S. Department of the Interior (USDI) has continued to study the nature of the sediment behind the dams and other factors that will help quantify downstream impacts from removing the dams. In addition, some changes unrelated to the project have occurred. The combination of these factors meant that some reevaluation of mitigation measures was in order, in particular those measures aimed at protecting either water quality or quantity for downstream users. It was the impacts of these new mitigation measures, as well as updates relevant to decision-making, that were the focus of a Supplemental EIS (SEIS). Technically, this document supplements the *Elwha River Ecosystem Restoration Implementation: Final Environmental Impact Statement*. It was written to stand alone for convenience; as previously mentioned, copies of the SEIS are also available on the Internet.

The SEIS and ROD address several changes related to using treated surface water rather than subsurface supplies; treatment of the city's municipal water supply; keeping the Washington Department of Fish and Wildlife (WDFW) fish-rearing channel open during dam removal; an increase in the number of reservation residents whose septic systems would be affected by the rise in surface water level of the river; the listing of two species of fish as threatened under the Endangered Species Act; and the changing economics of recycling concrete. The SEIS also identified and analyzed the impacts of providing, where appropriate, flood protection for public and private facilities, wastewater mitigation, and hatchery water protection and facility modifications. In addition, more detail is now available on actions that would occur as part of the revegetation of the dewatered reservoir sites.

The FEISs and RODs, Biological Opinions, Sediment Management Plan, (other documents to be added) are incorporated by reference.

Elwha Restoration Project
Project Components' Adjacent Property Owners/Addresses
(components listed north to south along river corridor, then eastward beyond river valley)

Project Component/Affected Parcels	Adjacent/Inclusive Property Owners/Mailing Addresses
